Objective:

A highly motivated **Software Engineer** looking for new opportunities to create meaningful applications.

Skills:

Front End: HTML, CSS, React, Next.js, jQuery, Redux, Tailwind, and Material UI.
Back End: Node.js, Express.js, MySQL, Firebase, and MongoDB.
Development: RESTful APIs, GraphQL, git, testing, and code reviews.

Certifications:

Amazon Web Services: AWS Certified Cloud Practitioner *(February 2022 - February 2025)*
Google Cloud: Certified Cloud Digital Leader *(January 2022 - January 2025)*
University of California, Berkeley: MERN Full Stack Coding Bootcamp (*2020*)

Work Experience:

Software Engineer Intern, Tapply Inc, *(November 2021 - February 2022)*
- Developed login, home, and single request page from Figma mockup design in Next.js and styled using Tailwind.
- Implemented RESTful API endpoints and functionality for posting and getting requests.
- Validated back end requests using JOI for object schema validation.
- Participated in agile development through daily stand ups and performing code reviews.

Senior Learning Assistant (Web Development), 2U *(February 2022 - Current)*
- Lead a team of 4 Learning Assistants to answer over 50 daily instructional support tickets on web development through Slack and Zoom.

Learning Assistant (Web Development), 2U *(May 2021 - February 2022)*
- Troubleshooted over 1,000 bugs in coding bootcamp student's full-stack web applications and effectively communicated a technical solution to help students learn.

Promoter, Wynn Las Vegas *(June 2018 - March 2020)*
Ecommerce Business Owner, Self-Employed *(July 2016 - June 2018)*
Securities Compliance Accountant II, DAC Bond *(June 2015 - July 2016)*

Project:

The Cocktail App Deployed | GitHub | Demo
- Used Redux to manage the state of the application when making external API calls to search for cocktails and get a specific cocktail by id.
- Designed a wireframe using Adobe XD and styled the application using Material UI.
- Authenticated users using Firebase's Google Provider and managed user's login state using React's useEffect and useContext on authentication change.
- Utilized firestore as a NoSQL database to save and render saved cocktails by user id.

Education:

University of Florida Master in International Business (*2015*)
University of Florida Bachelor of Science in Finance (*2014*)
